

Dear Hiring Manager,

I'm Tai-yu, a multipotentialite person. I major in Economics, have expertise in web development, and find enthusiasm in implementing world-changing ideas.

In 2016, the year before I served compulsory military, I worked as a Full-stack Web Developer in MediaTek Inc., top 5 IC design company worldwide. In backend, I am responsible for developing APIs for web, mobile, and wearable devices, and I also successfully developed a mutual authentication API backend for all our different services. In frontend, I bootstrapped an email template engine which uses React.js to render SVG charts and HTML email contents.

In 2017, in spare times during my military service, I helped a start-up to create a questionnaire system and introduced CI/CD automations. I managed a team of one PT and one intern and designed the architect for the integration of original Wordpress blog and newly developed and undeveloped features.

From my experiences, I am confident that I am the perfect fit to company. And, I am so excited to join your great team. I believe that engineers are those who can make differences, and I am looking forward to start the fabulous journey with your team.

Sincerely,  
Tai-yu Chen
